

2TONNES

THE IDEA

The 2Tonnes Workshop invites participants to explore the future as a team and try to limit climate change by limiting their emissions to 2 tons per person per year until 2050, the number of emissions necessary for a carbon neutral world. In the form of a simulation game, the workshop offers multiple choices of individual and collective actions and allows participants to embody public and private decision makers to test modes of governance towards carbon neutrality. At the end of the workshop, participants have access to the workshop data and can make action commitments to become actors of the transition themselves.

Target

All public

Objectives

Raising awareness
and encouraging
action

Tools

1 facilitator, 55 cards (in
person), digital tool
(online).

STAGES

Participants start by calculating their carbon footprint and getting an introduction to climate change and carbon accounting. Then participants alternately choose individual and collective actions to implement with budget constraints, for a total of 8 rounds. At the end of each round, the group observes the evolution of their carbon footprints. The workshop ends with the interpretation of the data with the facilitator to discover the keys to a successful low-carbon transition.

WHY?

The 2Tonnes workshop allows participants to discuss collective actions that can influence carbon emissions. This immersive and educational workshop boosts action on climate change by raising awareness among participants.
