

ENERGYCITIES

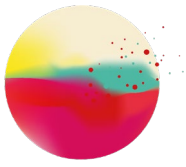

HOW CAN MUNICIPALITIES MAKE THE MOST OF PPAS

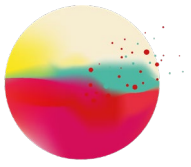

Municipal PPAs to support RES deployment

- Municipalities have considerable energy needs > influence on renewables fed into the grid
- Revenue stability > developers can invest with confidence

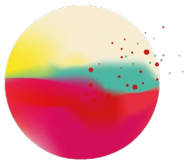

Advantages for municipalities

- Attractive power price over long term
- Contribute to sustainability goals
- Promote local economy/other social goals

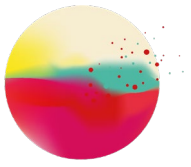

Challenges for municipalities

- Credit risks of the RES project developer
- Market risks
- National legal framework
- Complexity & admin burden

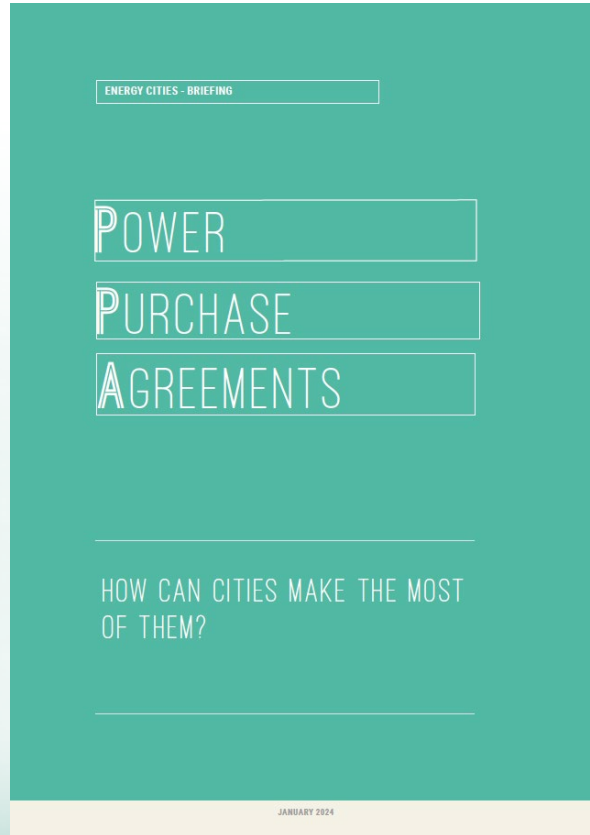

Some steps municipalities can take

- Decide on the goals they want the PPA to contribute to
- Have a clear « energy-picture » of the municipality
- Rules and contracts: PPAs structure? Demand pooling? Procurement law?

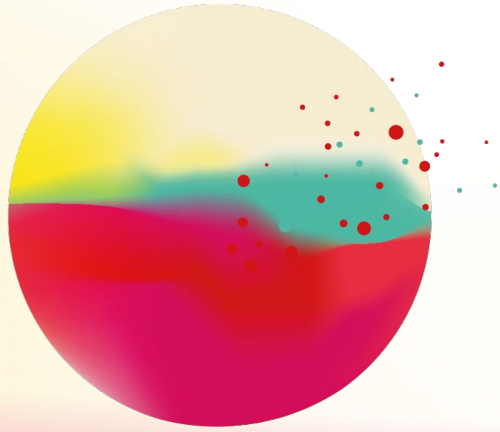

Recipe for success

- › Political buy-in
- › A dedicated team
- › Legal expertise (external support?)
- › Templates
- › First time? Keep it small/simple
