PROSPECT Policy webinar - Is it really possible to electrify our cities?

Tuesday 1 December, 11.00-12.30 CET

Electrification is on everyone's lips. It is the most straightforward way for Europe to reduce its dependency on fossil fuels and take control of energy prices and supply. This webinar will explore how we can translate this into practice within cities by focusing on two important issues: electricity grid congestion and setting up an attractive business model for electrification.
